

ラオスの焼畑二次林の有用樹種を含む樹木データベース

A Laotian tree database including useful varieties in secondary forests after slash-and-burn agriculture

森林減少の著しいラオスでは、様々な機関が森林保全等に取り組んでいる。しかし、樹木図鑑等の整備が遅れており、植物の同定が非常に困難である。樹木図鑑の整備が遅れているラオスにおいて、焼畑二次林に出現する樹木のさく葉標本を閲覧できるよう整備し、各樹木の特徴、用途、高解像度のさく葉標本画像などを収録したラオス語で検索が可能な樹木データベースを基盤情報として構築した。

Forest degradation in Lao PDR has expanded in recent years, with various organizations trying to implement forest conservation measures. However, basic information on plants is necessary for the preservation and management of forests as well as for studying the trees and the non-timber forest products (NTFPs). But in Laos, where development began only recently, there has been no progress as regards the maintenance of illustrated plant references and related materials. To address this concern, JIRCAS established a searchable database of secondary forests after slash-and-burn agriculture.

No	13	Code	NM218
Lao name	ເມົາຂົນ	Read	Mao khon
Scientific name	<i>Antidesma acidum Retz.</i>		
Family	Euphorbiaceae		
Habit	shrub		
Use	eat		
Part	fruit, firewood		
Statute	recollect		

名称、特徴、用途などの掲載情報
