

外国出張報告書

平成 26 年 2 月 27 日

1. 出張国名 フィリピン
2. 出張月 平成 27 年 1 月 ～2 月
3. 出張目的 リン酸欠乏及び亜鉛欠乏耐性に関する調査と研究打ち合わせ：B

4. 成果の概要

The main purpose of my visit to IRRI was to attend the annual project meeting of the BBSRC project on Zn uptake and translocation to grain.

Three participants from the UK, two from JIRCAS, and four from IRRI gathered for 4 days to discuss experiments conducted in 2014, develop outlines for joint papers and plan the final year activities.

I furthermore joined the ongoing GRiSP annual meetings, discussed several matters related to a project extension with IRRI program leaders and met with members of the IRRI training center to discuss matter related to my current student based at IRRI.

Field visits to Zn deficient sites (Bay) and P deficient sites (Pangil) were made to phenotype ongoing experiments.
