

外国出張報告書

平成27年11月16日

1. 出張国名 中国
2. 出張月 平成27年9月
3. 出張目的 雲南農業大学におけるイネ育種研究のワークショップへの参加：B
4. 成果の概要

I have attended the “Annual meeting for Blast Research Network for Stable Rice Production” and “Workshop for Advance Rice Innovation study” held at Yunnan Agricultural University, Kunming-China, from September 27th to 30th for an oral presentation entitled “Tolerance to P deficiency in rice – Building a breeding network”.

My presentation in the “Workshop for Advance Rice Innovation study” basically focused in the discovery and characterization of *Pup1* locus and *PSTOL1* gene, and the development of mega cultivars carrying *Pup1* locus and *PSTOL1*. The workshop was a good opportunity to disseminate our achievements and to approach to potential new members for our breeding network.
